

Cerner® Mobile Front-End Speech

Mobile Documentation for Cerner Users

M*Modal Fluency Direct® in conjunction with M*Modal Fluency Mobile™ leverages top-ranking M*Modal technology to speech enable mobile workflows and deliver greater efficiency and ease of use to physicians.

- M*Modal Fluency Mobile enables users to quickly and efficiently create documents on the go with front-end speech recognition using the same speech profile as M*Modal Fluency Direct. By sharing user profiles, training times are accelerated and accuracy improved.
- Users can create documents and have them immediately delivered to Cerner right from the same mobile device simultaneously running PowerChart™ Touch.
- Documents created with M*Modal Fluency Mobile are available for review within Cerner Millennium® and PowerChart Touch.
- Users can simultaneously review historical patient information from within PowerChart Touch and create new documents.
- M*Modal Fluency Mobile supports iOS and Android devices.
- To support personalized workflows, M*Modal Fluency Mobile allows users to optionally send documentation to a transcriptionist.
- M*Modal solutions are fully HIPAA complaint and secure.

When using M*Modal Speech Understanding™ in conjunction with Cerner applications, all speech-related data is securely and reliably transmitted with 256-bit encryption and TLS 1.2 (Transport Layer Security) protocols.
